

Cumulative contents of Volume 109

Volume 109, Nos. 1-2, October 1993

| | |
|--|-----|
| Numerical investigation of the laminar boundary layer flow around an impulsively moved circular cylinder <i>C.I. Christov and I.T. Tzankov</i> | 1 |
| The theory of density representation of finite element meshes. Examples of density operators with quadrilateral elements in the mapped domain <i>J. Hugger</i> | 17 |
| Recovery and few parameter representation of the optimal mesh density function for near optimal finite element meshes <i>J. Hugger</i> | 41 |
| Universal anisotropic yield criterion based on superquadric functional representation: Part 1. Algorithmic issues and accuracy analysis <i>M. Dutko, D. Perić and D.R.J. Owen</i> | 73 |
| Efficient evaluation of volume integrals in the boundary element method <i>R. Dallner and G. Kuhn</i> | 95 |
| Integration of plasticity equations for the case of Ziegler's kinematic hardening <i>F. Genna</i> | 111 |
| On the computational efficiency of certain upwinding schemes <i>A. Al-Rabeh</i> | 131 |
| Static and vibrational shape and topology optimization using homogenization and mathematical programming <i>L.H. Tenek and I. Hagiwara</i> | 143 |
| Optimization of material distribution within isotropic and anisotropic plates using homogenization <i>L.H. Tenek and I. Hagiwara</i> | 155 |
| An anisotropic <i>h</i> -type mesh-refinement strategy <i>W. Rachowicz</i> | 169 |
| Approximate method to compute the eigenvalues and eigensensitivities of mechanical systems <i>V.F. Poterasu</i> | 183 |
| Euromech Meetings | 193 |

Volume 109, Nos. 3-4, November 1993

| | |
|--|-----|
| A natural triangular layered element for bending analysis of isotropic, sandwich, laminated composite and hybrid plates <i>J. Argyris and L. Tenek</i> | 197 |
| Accuracy and effectiveness of preconditioned conjugate gradient algorithms for large and ill-conditioned problems <i>M. Papadrakakis and N. Bitoulas</i> | 219 |
| Three-dimensional incompressible viscoelasticity in large strains: Formulation and numerical approximation <i>P. Le Tallec, C. Rahier and A. Kaiss</i> | 233 |
| Stochastic boundary elements in elastostatics <i>I. Kaljević and S. Saigal</i> | 259 |
| Numerical analysis of a three-fields model for a quasi-Newtonian flow <i>J. Baranger, K. Najib and D. Sandri</i> | 281 |
| Variational principles for a class of finite step elastoplastic problems with non-linear mixed hardening <i>G. Romano, L. Rosati and F. Marotti de Sciarra</i> | 293 |
| An incremental relaxation finite element analysis of viscoelastic problems with contact and friction <i>W.H. Chen, C.M. Chang and J.T. Yeh</i> | 315 |
| Finite volume method for thermo-elasto-plastic stress analysis <i>I. Demirdžić and D. Martinović</i> | 331 |
| Symbolic derivation of kinematic equations of robots via computers <i>C. Vibet</i> | 351 |
| Hybrid stress formulation for higher-order theory of laminated shell analysis <i>S. Di and E. Ramm</i> | 359 |
| An improved solution to thermoelastic material design in functionally gradient materials: Scheme to reduce thermal stresses <i>K. Tanaka, Y. Tanaka, H. Watanabe, V.F. Poterasu and Y. Sugano</i> | 377 |
